I have been a trucker for over 30 years and whenever I would get to within 50 miles of cities that I was going to have to deliver into I always tried to get the local traffic conditions but interference was always a problem. By the time I did have the traffic information I needed it was too late and I was caught in traffic backups causing me to be late with my deliveries. Also, advance severe weather advisories in your travel path is better known BEFORE you get into them rather than be caught in them. Satellite radio, especially the XM SATELLITE RADIO is a service that I subscribe to, and pay a monthly fee in order to get this service. I resent the NAB(National Association of Broadcasters) trying to dictate what I can and cannot listen to and I am opposed to the passing of HR 4026. SATELLITE RADIO represents only a very small percentage of the total radio listening audience. Please, do not hinder my right to choose what I want to listen to, especially if I am willing to pay for it.
Thanks you.
